## Data dictionary

In Geographic Information Systems (GIS), data dictionaries are used as a means to record the names of the attributes (items) in a feature class, together with a description of the attribute values, and lookup tables, for which a data dictionary has been provided.

Data dictionary table contains the following information: file name, feature category, feature class, spatial type, description, item name, key, option, type, width and item description.

For item type, a code is used to describe the field type:

C = Character field

D = Date field

N = Number field

For Key, a code is used to indicate whether the item or field is a key used to link to tables:

P = Primary key

F = Foreign key

Null = Not a key

For Optional, a code is used to indicate whether the items or fields that may or may not be provided:

Y = Optional

Null = Not optional

A user can view the attribute table of a theme as described in the data dictionary listing at the beginning of this document and see the item names along with the data type and description.

When a user views the attribute table, the user will see the item names described in the data dictionary, and their contents. The user will also see several items that are standard to ESRI ArcSDE feature classes. These standard (internal) items have been omitted from the enclosed data dictionary descriptions for ease of reading. The omitted items are as follows:

| Item names | Type | Item description                                       |
|------------|------|--------------------------------------------------------|
| OBJECTID   | N    | Unique identifier for each object in the feature class |
| SHAPE      | C    | Geometry type                                          |
| SHAPE.AREA | N    | Area of polygon – limited to polygon data              |
| SHAPE.LEN  | N    | Length of line – limited to line data                  |

Feature class : EXPL\_CORELIBRARY\_DRILLHOLES\_GSD

Feature category: Geology

Spatial type: Point

Legend name: Core Library Drillholes

Description: Identifies the location of some of the core held by GSWA; point feature

Source: Department of Mines and Petroleum

DMP custodian: Geological Survey Division

ANZLIC metadata ID: ANZWA1220000655

Conditions of access: Subject to data custodian license agreement. For internal use only.

| Item name    | Key | Display | Type | Width | Description                            |
|--------------|-----|---------|------|-------|----------------------------------------|
| SHORT_NAME   |     | Yes     | C    | 21    | Short name for drillhole               |
| UWI          |     | Yes     | C    | 21    | Unique system identifier               |
| DEPTH        |     | Yes     | C    | 19    | Depth of core sample                   |
| PROSPECT     |     | Yes     | C    | 65    | Prospect name                          |
| SUBBASIN     |     | Yes     | C    | 41    | Sub Basin Name                         |
| LEASE        |     | Yes     | C    | 21    | Lease Identifier                       |
| WELL_NAME    |     | Yes     | C    | 51    | Drillhole full name                    |
| COMMODITY    |     | Yes     | C    | 21    | Commodity type                         |
| OPERATOR     |     | Yes     | C    | 60    | Drillhole operator                     |
| BASIN        |     | Yes     | C    | 25    | Basin name                             |
| FILE_TYPE    |     | Yes     | C    | 40    | Source of drillhole information        |
| FILE_NO      |     | Yes     | C    | 10    | File number                            |
| FILE_VOL     |     | Yes     | C    | 19    | File volume number                     |
| DIP          |     | Yes     | C    | 13    | Dip angle                              |
| AZIMUTH      |     | Yes     | C    | 19    | Drillhole azimuth                      |
| TVD          |     | Yes     | C    | 19    | Total depth                            |
| CORE         |     | Yes     | C    | 21    | Indicates if core held by GSWA         |
| CORESTORE    |     | Yes     | C    | 65    | Core Store                             |
| EXTRACT_DATE |     |         | D    |       | Data information extracted from source |
